

VS FOCUM 's main activity is related to research, manufacturing and selling of firefighting foams. The side activities of the company are related to selling machinery against fires and also consulting and developing analysis of firefighting foam concentrates from systems against fires.

If in any other activity the implementation of a Quality and Environmental System is nowadays essential, it is much more reasonable in our case because given the fact that we serve a firefighting foam that is not completely adequate, or leaking performance, that product could carry along problems of incalculable dimension in case of a sinister: pipe jams, not controlling the fire, etc. Equally, an inaccurate consult or a wrong analysis could induce into unjustified trust in the client putting it in danger in an industrial system against fires. The same treatment happens when selling non-appropriate machinery.

For these particular reasons, vs FOCUM emphasizes the following:

- *Training in indispensable knowledge and reporting the staff about the measuring and precautions to take in each process whether it is research, manufacturing, control or selling of the products.*
- *Respecting the chain of events from the selection of raw materials, receipt of the same, conformity analysis, production of a formula where raw materials serve as ingredients, subsequent analysis of the formula and manufacturing, control and later packing.*
- *The consciousness-raising from all the staff that the progress philosophy of the company is directly linked to the creation of prestige in terms of products and services as the fundamental pillars of a stable future.*

For that, vs FOCUM undertake the following:

- ***V**erifying the grade of satisfaction of its clients with the products, adopting the necessary corrective measures.*
- ***S**erving the request of collaboration with its providers demanding the required quality in the specifications at the purchasing of raw materials and reporting both them and the customers about the benefits of using Environmental Management Systems.*
- ***F**ostering the implantation of environmental improvements in its processes, reducing -up to technology and company means availability-, the environmental effects produced over the environment.*
- ***O**bserving and keeping a compromise of continuous improvements and pollution prevention.*
- ***C**ompromise in obeying the current legislation and applicable regulations to the company activities as well as another additional requirements dictated by the organization.*
- ***U**sing an Environmental Management System that guarantees that every activity carried out by VS FOCUM reduces considerably the environmental impact that it may produce.*
- ***M**aintaining the adequate goals for cutting the impacts produced by our activity contributing with the necessary resources for the achievement of the goals proposed.*

This way, the Management is binding on each and every aspect of VS FOCUM related with the quality of the product and respect for the Environment, the management system defined by the Quality & Environmental Management System. All the staff will assume the corresponding responsibilities according to this obligation.

The Manager delegates on the Responsible of Quality and Environment about the establishment, development and update of the Quality & Environmental Management System, bestowing the authority, freedom and necessary resources for the task.

MANAGER
